

```

#include <iostream>
#include <vector>
#include <stack>
using namespace std;

int main(){
    int currSet = 1; //Counter indicating which set we are on
    int numNames; //Variable for number of names in the set

    while (cin >> numNames && numNames != 0){ //loop to loop through the set of names
while the number of names is not 0
        vector<string> namesOdd; //create vector for odd index names
        vector<string> namesEven; //create vector for even index names
        cout << "SET " << currSet << endl; //print which set # we are on
        currSet = currSet + 1; //update set counter

        for (int i = 0; i < numNames; i++){ //loop to iterate through the set of names
            string name;
            cin >> name; //take in the names
            if (i % 2 == 0){ //if the index /2 returns a remainder of 0 (AKA the index is
even)
                namesEven.push_back(name); //put the name in the even index vectoor
            }else {
                namesOdd.push_back(name); //otherwise put it in the odd index vector
            }
        }
        for (int i = 0; i < namesEven.size(); i++){ //loop to print the even index
names
            cout << namesEven[i] << endl;
        }
        for (int i = namesOdd.size() - 1; i >= 0; i--){ //iterate BACKWARDS through
the odd index vector and print the names
            cout << namesOdd[i] << endl;
        }
    }

    return 0;
}

```
